

Feed costs account for **60%** of a dairy's expenses on average

Shouldn't your feed management process be flexible to your needs and offer consistent and dependable quality and accuracy?

Micro-Weigh System

This system uses precision micro ingredient delivery that maximizes performance and saves costs. It accurately measures the nutrients and ingredients needed for flexible ration delivery per pen, reducing shrink and ensuring consistency in every batch of feed. The Micro Weigh System:

- Provides the flexibility to customize to the nutritionist's specifications
- Minimizes shrink through a closed micro feed ingredient delivery system
- Provides the ability to access accurate reports to ensure efficient inventory management

Pro-Control Batcher

This computerized system manages macro ingredients in feed production to improve the accuracy and speed of diet composition. The Pro-Control Batcher:

- Produces accurate and consistent rations every time
- Offers built-in Statistical Process Control (SPC) to provide quality control for precision management
- Provides full audit trail from individual ingredients to the feed lane
- Ensures full compliance with FDA Current Good Manufacturing Practices (CGMP) guidelines

See how one New Mexico dairy was able to save **\$225.34 per day** and **\$82,249 annually**, by using MWI's feed management system. Scan the code below to learn more.
